

COMPONENTS OF A BRA

APEX

Point at which the strap meets the bra, this too will relate to the cup size & style

HOOK & EYE

The point at which the bra is secured around Enhances the anchorage of the bra. Increases with larger cups

STRAPS

Help to balance the weight of the bust in the bra and width will relate to the cup size

WING

This should offer firm control, and spread the pressure over an area rather than one point

WIRES

This aids support & anchorage of a bra, the larger the bust the stronger the wires

TRENDSLO

This helps strengthen the wing fabric and prevents it from collapsing Essential for larger cup support

CUP

The fabric of the bra that encloses the breast and supports it.

CENTRE FRONT

This is the central point of the bra between the cups, which sits flat on the breast bone, if the garment is fitting correctly

CRADLE

Required to achieve anchorage of the bra and control the wires
